

Roundshot Livecam - The Top 360° Webcam For Aviation

image: Livecam People's Airport Altenrhein - <https://szr.roundshot.com/#?imgId=127846304>

fantastic image quality

Crystal clear images and videos up to 360° in all weather conditions - up to 144 million pixels!

specific aviation features

Display of airfield/airport information (operating times, METAR).
Compatible with regulatory guidelines (e.g. EASA).

plug & play

Installation is easy - and thanks to our multimedia web tools you are online immediately.

a solid investment

Proven reliability and longevity of the product combined with professional service.

The Roundshot camera is the Rolls Royce of webcams. Super nice pictures - pin sharp and 24/7, with a world-class support. We on the Gemmi were the first in the Valais to be convinced of the quality and service of the Seitz company. Since 2014, our guests have also been able to always appreciate the marvellous views at the Gemmi.

Wolfgang Loretan Gemmibahnen AG Leukerbad

In aviation, up-to-date weather information of good quality is essential. With the information provided the Roundshot cameras, our students and pilots can plan their routes optimally. In addition to the images of airfields, the cameras in the mountains are very important to us. We can no longer imagine modern flight planning without Roundshot.

Willi Dysli, aviation school Grenchen

The 360° roundshot webcam at Buochs airport, home base of the famous aircraft factory, offers a perfect overview of the flight conditions around our airfield. It is an important additional tool for flight planning for arrivals and departures from the LSZC airport.

Andreas Kleeb - airport Buochs

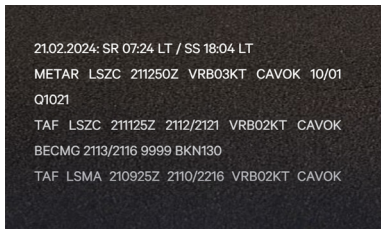

Clear Visibility Even At Night

image: Livecam People's Airport Altenrhein - <https://szr.roundshot.com/#?imgid=131828012>

specific aviation features

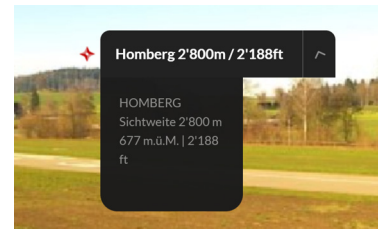

Display of airfield/airport information

- operating hours
- METAR - automatic update with script via external web link

Compliant with regulatory guidelines

(e.g. EASA GM" CAT.OP.MPA.192 "supplemental meteorological information")

- Defined altitude above sea + GPS location
- Azimuth / compass direction in NESW or in degrees, depending on the viewing angle and zoom level
- Images with date/time stamp in website or optionally embedded in image
- Times optionally in UTC instead of local time
- Fixed points in the image can be marked by "hot spots" (e.g. surrounding terrain)
- Link to other cameras in the picture
- Reference image with visibility
- Night pictures in very good quality
